

C&G 6160-04 Control Entry and Arrangements for Confined Spaces

Course Aim

The aim of this unit is to reflect the national occupational standard for controlling entry and arrangements in a high-risk confined space. A high-risk environment exists when there is a specified hazard that cannot be controlled or eliminated. There may or may not be access issues, and it is expected that work activities are carried out in the presence of a specified risk.

This unit covers both water and non-water industry areas. This may include working with potable water, sewage treatment processes, drain and sewer cleaning operations, or where the operative is working in or near water, or where a confined space is subject to surface water flooding.

And for the non-water, this may include pharmaceutical, petrochemical, asbestos removal, vehicle manufacture and servicing, aeronautical, construction, communications, power, utilities, gas, electrical, and mechanical engineering, and some elements of work operations in mines, quarries, and tunnelling.

Please be aware that the safe working load (SWL) of equipment used during the practical session of this course is **136KG**.

If a delegate who wishes to attend is above this weight, please contact us on **0345 766 7799** to check if additional provisions can be made for your chosen course.

Certification

Delegates will, on successful completion of the course, receive City & Guilds High Control Entry and Arrangements for Confined Spaces (6160-04).

Who Should Attend?

This course is for an entry controller/top person who controls entry and arrangements for **high risk** confined spaces without entering them. It includes the duties of an entry controller, pre-entry procedures, entry into and exit from the confined space, maintaining communications, and initiating and controlling emergency procedures.

Please note: In order to undertake this course, delegates **MUST** be clean-shaven to ensure there is no obstruction to the face-fit mask required for practical assessment.

Agenda

- Implement procedures for teams working in confined spaces
- Control safe entry and exit to the confined space
- Monitor the work team to ensure procedures are followed
- Control emergency situations
- Understand health and safety and environmental legislation
- Understand standard protocols for work in confined spaces
- Understand entry controller duties and responsibilities
- Understand equipment checks and testing required

Course Duration

This is a 1-day course
