Fire Door Installation Awareness

Course Aim

This theory-based Fire Door Installation Awareness course aims to ensure that delegates have a clear understanding of the role of timber fire door assemblies and door sets as well as why it is important they are correctly installed.

Who Should Attend?

The Fire Door Installation Training course is for any delegate who works closely with the installation of Fire Timber doors. It is also suitable for those working in the construction industry to raise awareness of the factors involved in the appropriate installation of timber fire doors.

NOCN have produced this assured course through collaborative working with the British Woodworking Federation to promote awareness in the construction industry.

Course Duration

This is a 2 day course.

Certification

Upon successful completion of the course delegates will receive a NOCN SiteRight Qualification.

Agenda

This course covers:

- The role of timber fire door assemblies and door sets and why it is important that they are installed correctly
- Understanding how fire door assemblies and door sets work and their place in the wider passive fire protection system
- Legislation and guidance associated with fire door assemblies and door sets
- Considerations before installing fire door assemblies and door sets
- Considerations when installing fire door assemblies and door sets
- Considerations on completion of the installation of fire door assemblies and door set
