

Face Fit Testing of Respiratory Protective Equipment

Course Aim

This course will provide delegates with the knowledge and competency required to perform face fit testing, ensuring the correct fitting of suitable respiratory protection equipment (RPE) using qualitative filtering facepiece (FFP) or half masks and / or quantitative tight fitting respirators testing methods.

Note:

Testing is designed to test the specific mask as used by the delegate. You must bring a suitable mask with you that you wish to be fit tested for.

Agenda

This course covers the following:

- Introduction to face fit testing requirements
- RPE selection & correct use
- Record keeping
- Correct disposal of RPE
- Demonstration of qualitative and / or quantitative techniques
- Exam and practical test

Who Should Attend?

Delegates who are responsible for providing respiratory protective equipment to their employees are required to show documentary evidence that the respiratory protective equipment (RPE) fits the wearer.

By subjecting each wearer to a face fit test you can be sure your organisation is fulfilling Health Service Executive (HSE) requirements.

Certification

Delegates successfully completing the course will be awarded a Certificate of Attendance endorsed by The HSE.

Requalification every three years.

Course Duration

This is a 0.5 to 1 Day dependent upon RPE requirements
